NODE

ASSESMENT – 1

Task: Create a website using assets and handlebars, which is having 3-4 menu options like home, About Us, Contact Us. with Node.js and Express

In this task, you will be required to build a simple blogging platform using Node.js and Express.

Requirements:

Use Node.js and Express to build the server-side application

Use a **handlebars** for creating HTML

Bonus Points:

load dummy data with apropriate Custom CSS

Instructions:

Clone the starter code from the following GitHub repository:
https://github.com/yourusername/nodejs-blog-platform

Install any required dependencies using npm or yarn

Implement the server-side functionality by creating the necessary routes.

Implement the client-side functionality by creating the necessary views.

Test the application locally to ensure that it meets the requirements

Push your changes to your GitHub repository and submit the link to your repository for review

Good luck with the assessment!
